EU-TYPE EXAMINATION CERTIFICATE

Issued by Liftinstituut B.V.
identification number Notified Body 0400,
commissioned by Decree no. 2022-0000107366

Certificate no. : NL20-400-1002-243-02 Revision no.: 1

Description of the product : Disc brakes used for Ascending Safety Device and Unintended Car Movement Protection

Trademark : Sassi

Type no. : DGXY series

Name and address of the manufacturer : Alberto Sassi S.p.A.
Via Guido Rossa 1
Località Crespellano
40053 VALSAMOGGIA (Bo), ITALY

Name and address of the certificate holder : Alberto Sassi S.p.A.
Via Guido Rossa 1
Località Crespellano
40053 VALSAMOGGIA (Bo), ITALY

Certificate issued on the following requirements : Lifts Directive 2014/33/EU

Certificate based on the following standard : EN 81-20:2020, EN 81-50:2020

Test laboratory : None

Date and number of the laboratory report : None

Date of EU-type examination : August 2022

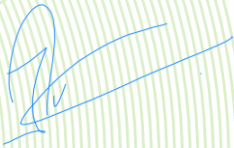

Additional document with this certificate : Report belonging to the EU-type examination certificate no.: NL20-400-1002-243-02 rev. 1

Additional remarks : This revision replaces certificate NL20-400-1002-243-02 of 03-03-2020

Conclusion : The safety component meets the requirements of the Lifts Directive 2014/33/EU taking into account any additional remarks mentioned above

Amsterdam

Date : 09-08-2022
Valid until : 03-03-2025

Certification decision by

Report EU-type examination

Report belonging to EU-type examination certificate number	: NL20-400-1002-243-02
Date of issue of original certificate	: 03-03-2020
Certificate applies to	: Safety component
Revision number / date	: 1, 09-08-2022
Requirements	: Lifts Directive 2014/33/EU Standards: EN 81-20:2020, EN 81-50:2020
Project number	: P220310

1. General specifications

Description of the product	: Ascending Safety Device and Unintended Car Movement Protection
Trademark	: Sassi
Type no.	: DGXY series
Name and address of the manufacturer	: Alberto Sassi S.p.A. Via Guido Rossa 1 Località Crespellano 40053 VALSAMOGGIA (Bo), ITALY
Laboratory	: -
Address of examined product	: Via Guido Rossa 1 Località Crespellano 40053 VALSAMOGGIA (Bo), ITALY
Data of examination	: August 2022
Examination performed by	: E. Verkaik

2. Description safety component

The ascending safety device and unintended car movement protection consists of electro-mechanical brakes, acting on one, two or three disc brakes.

The main pressure plate is split into two and each half functions on the brake disc(s) independently from the other to create redundancy.

The brake torque is fixed and depends on the depth of the spring seat of the 8 guided compression springs and the number of springs shall not be changed in the field. There is only one spring type. The type of coil casing is indicated on a sticker at the cover of the brake.

There are two depths of spring seat possible. For the low torque brake DGA1 (only with one brake disc) the depth is greater than the depths of spring seat for brake DG01, DG02 and DG03 (1, 2 and 3 brake discs).

The mounting diameter of the brake shaft has an outer diameter of 50 mm with 15 teeth of splined profile.

The brakes fulfill the requirements of EN 81-20 and are also used as holding brakes during normal operation of the lift.

The unintended car movement protection must be triggered by a system which fulfills the requirements of EN 81-20 art. 5.11.2.3. The total delays in the system must be small enough to fulfill the demands for stopping distances of EN 81-20 art. 5.6.7.5.

The maximum stopping distance for unintended car movement allowed is depending on the height of the entrances and the length of the apron.

The ascending car overspeed protection shall be actuated by a governor contact or equivalent device fulfilling the requirements of EN 81-20 art. 5.6.6 which was no part of this investigation.

There are various versions of the DGXY brake with front-mounted discs that differ in terms of size, the use of a different amount of brake discs in relation to the braking torque to be obtained and for the use of brake discs with reduced braking torque. This product diversification is further specified in Tables 1 and 2 according to the abbreviation used.

Table 1 Decoding of the brake name

BRAKE DGXY	Coil casing	No. braking discs
X	0 – standard braking torque A – reduced braking torque	
Y		1 – No. 1 disc 2 – No. 2 discs 3 – No. 3 discs

Table 2 Models and features of brakes produced

Model	Dynamic braking torque [Nm]	T ₁₀ [ms]	T ₅₀ [ms]	T ₉₀ [ms]	Energy [J]	Length [mm]	Weight [kg]
DG01	2 x 225	10	30	90	15000	90	25
DG02	2 x 425				30000	115	30
DG03	2 x 600				45000	135	35
DGA1	2 x 150				15000	90	25

For each certified torque, reaction times for the brake must be defined [ms]
T₀ = time between switching DC current and starting braking action
T₁₀= time to reach 10% of braking torque
T₅₀= time to reach 50% of braking torque
T₉₀= time to reach 90% of braking torque

Max speed for traction sheave : 1000 rpm

See annex 1 for a general overview of the product

3. Examinations and tests

The examination covered a check whether compliance with the Lift Directive 2014/33/EU is met, if possible based on the harmonized product standards EN 81-20:2020 and EN 81-50:2020.

Issues not covered by or not complying these Standards are directly related to the above-mentioned essential requirements based on the risk assessment, where applicable with the aid of harmonized A-and B-standards.

The examination included:

- Examination of the technical file (See annex 2).
- Check of performed calculations according to EN 81-50:2020.
- Examination of the representative model in order to establish conformity with the technical file.
- Inspections and tests to check compliance with the requirements.

4. Results

After the final examination the product and the technical file were found in accordance with the requirements. The functional tests passed without remarks.

The load tests passed without remarks and did not lead to permanent deformations or loss of stability.

4.1 Calculations

The calculations were found in accordance with the requirements.

4.2. Measurements

The measurements were found in accordance with the requirements.

5. Conditions

Additional to or in deviation of the applicable demands in the considered requirements / standards (see certificate and/or page 1 of this report), the following conditions shall be taken into account:

- The brakes shall be applied within the application range that is specified in chapter 2 of this report.
- The maximum tripping speed of the governor contact or similar device that is used to activate the ascending car overspeed protection shall be according EN 81-20 art. 5.6.6.
- The unintended car movement protection must be triggered by a system which fulfills the requirements of EN 81-20 art. 5.11.2.3.

6. Conclusions

Based upon the results of the EU-type examination Liftinstituut B.V. issues an EU-type examination certificate.

The EU-type examination certificate is only valid for products which are in conformity with the same specifications as the type certified product. The certificate is issued based on the requirements that are valid at the date of issue. In case of changes of the product specifications, changes in the requirements or changes in the state of the art the certificate holder shall request Liftinstituut B.V. to reconsider the validity of the certificate.

liftinstituut
SINCE 1933

7. CE marking and EU Declaration of conformity

Every safety component that is placed on the market in complete conformity with the examined type must be provided with a CE marking according to article 18 of the Lift directive 2014/33/EU under consideration that conformity with eventually other applicable Directives is proven. Also every safety component must be accompanied by an EU declaration of conformity according to annex II of the Directive in which the name, address and Notified Body identification number of Liftinstituut B.V. must be included as well as the number of the EU-type examination certificate.

An EU type-certified safety component shall be random checked e.g. according to annex IX of the Lift directive 2014/33/EU before these safety components may be CE-marked and may be placed on the market. For further information see regulation 2.0.1 'Regulations for product certification' on www.liftinstituut.com.

Gearless G-100/180/200/300/400 + Brake DG/DF/DQ with manual release levers

Only skilled personell can operate according the following procedures

- 1** Close and block landingdoors;
Switch off the mains switch;
Do not deactivate safety devices.

- 2** Reassure passengers and inform them that they should not attempt to leave the cabin before the system has been secured.

- 3 HOW TO OPERATE THE MANUAL RELEASE OF THE SERVICE BRAKE**

- a- Turn the manual release levers very carefully.
- b- Turn the levers either right of left.

Each lever acts on half brake, thus annulling the braking torque!

ATTENTION : CABIN CAN MOVE UPWARDS OR DOWNWARDS WITH REGARD TO THE LOAD!

Open and close the service brake intermittently until you reach the nearest floor.

WARNING: IN THE EVENT OF SUDDEN ACCELERATION OF THE CABIN IMMEDIATELY CLOSE THE BRAKE BY RELEASING THE LEVERS.

- 4 EXIT OF PASSENGERS:**
 - a- Keep levers in vertical position with closed brake.
 - b- Cabin must be at still stand.
 - c- Open manually landing door and let people coming out.
 - d- Close landing doors properly.

IF UNABLE TO MOVE THE CABIN BY HAND AS INDICATED, IMMEDIATELY NOTIFY THE SAFETY RESCUE SERVICE.

contact number or person in case of need: _____

1 Close and block doors at floor – Switch off the mains switch - **The service brake must be closed and no oil must be present in drum brake**

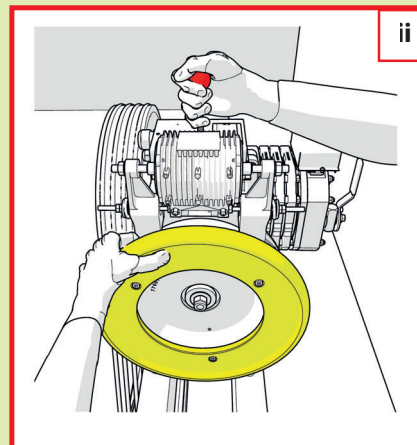

2 Reassure passengers and inform them that they **should not attempt to leave the cabin before the system has been secured**

3 HOW TO OPERATE MANUAL RELEASE OF THE BRAKE

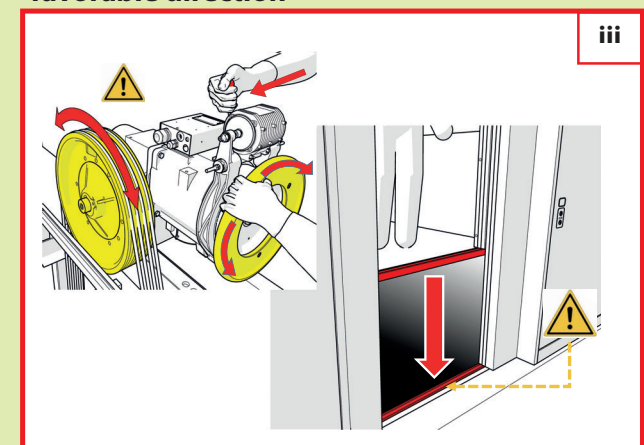

Release the emergency brake (if present)

Release the service brake

Rotate the flywheel in the most favorable direction

ATTENTION: THE CABIN COULD MOVE UPWARDS OR DOWNWARDS DEPENDING ON THE LOAD

Open the service brake carefully and intermittently (Fig. iii) and move the cabin slowly.

ATTENTION: IN CASE OF SUDDEN ACCELERATION OF THE CABIN , LEAVE THE LEVER FOR BRAKE OPENING IMMEDIATELY

4 **EXIT OF PASSENGERS** Manually open the doors at the floor where the cabin is positioned and let passengers get out

5 RESTART OF THE INSTALLATION

CASE A: unscrew the 2 or 3 nuts and position them at a distance of 4 mm from coil's body

CASE B: restore the initial position of brake levers

IF UNABLE TO MOVE THE CABIN MANUALLY, NOTIFY THE RESCUE SERVICE IMMEDIATELY
